Pure-noise diagonal: band-limited projection (color) against the exact pair-count answer (black)
Kernel at the bin center: never settles
band-limited projection
exact pair-count answer
partial sum / exact diagonal
band limit $\ell_{\max}$
Bin-averaged kernels: converges, slowly
bin, with π/width dotted
2.5 to 3.1 arcmin
38 to 47 arcmin
718 to 900 arcmin
band limit $\ell_{\max}$
First matrix row: projection against exact
exact: CoCoA's analytic term
projected, $\ell_{\max} = 2,000$
projected, $\ell_{\max} = 30,000$
entry / exact diagonal
θ_j [arcmin]
